

Task: Predicting Government Stock Price

Objective:

- 1) Your task is to predict the stock price of a government entity for the next year using PowerBI.
- 2) Obtain at least 3-5 years of historical stock price data for the government stock you are analyzing. Ensure the data includes fields such as Date, Opening Price, Closing Price, and Volume.
- 3) The goal is to create a report that not only forecasts future prices but also visually presents the historical data alongside the predictions.
- 4) Create visualize report and also convert that future prediction data into excel file.
